Main goals

- To build a formal ontology

- To define a "bottom up" ontology in connection with the social environment and sustainable in the socio – cultural context

- To share the processes of construction and verification using the web site

ontology

Step 1 – detection of key words from cases study UHI ☑

Step 2 – identification of the referents (one for each partner)

PdT: Laura Farinetti
UHI: Sean Mehan
SFEP: Maurizio Lorenzatto
Bethel: Monika Kruse
INFOP: Stefano Vitale
UB: Begoña Gros
UdP: Georgeta Chirlesan
YHSV: Johnny Pettersson until 31/12/2004, then Kim Roos
UoA: Elisabeth Fern
THC: Alan Humphries ?

Technical assistant: Federico Pescarmona (PdT)

Step 3 – identification of the firsts words (the beginning)
using the works of the previous meetings (UHI)

ontology

Step 4 – Construction of a dedicated section in the web site
by PdT (elite.polito.it/cable)

Step 5 – each referent send the definitions in original
language and in English to SFEP
(maurizio.lorenzatto@elite.polito.it)

It is very important that the referent works really close to the own
virtuous circle and institution and that he can guarantee the respect of
the times

Step 6 – collection of definitions and loading on the web site
by SFEP – PdT

ontology

Step 7 – SFEP propose a synthesis (in English) for each completed word (defined by all pedagogical partners) and publish it on the web site

Step 8 – each referent periodically verify the state of the works and give a feed-back to SFEP (according with own v.c. and ist.) If all partner are agree, the word will be marked in green. If one of more disagree, they send their considerations to the mailing lists (both CABLE's and PRAISE's) and then SFEP will try with one other synthesis. In case of further disagrees, the word will be marked in red and will be discussed in the nearest face to face meeting.
